Project Resource Management

A one-day course which revises the overall Project Management process and discusses why resources are inherently always a problem in project planning. The course investigates the different resource types, and encompasses contracting as a common solution for people resource problems.

Methods to solve resource shortages are discussed including changing plans, changing schedules, adding more resources, or changing project objectives.

This 'Resource Management' aspect of Project Management is then put to the test in a safe environment during the afternoon session in a Project Management Simulation.

Morning Session:
1. Overview of the Project Management Process
2. Why are Resources scarce?
3. Project Resource Planning
4. Project Resource Requirements
5. Solving Project Resource Problems

Afternoon Session:
3 hour Simulation – based on resourcing a project to a successful conclusion

(includes breaks)

Results, Feedback and Lessons Learnt.
