

Warehouse Construction Simulation

What is it?

A simulation project based around a simple Warehouse Construction Project. You will be required to assign resources to 7 tasks to ensure the project completes on time, and within budget. You will have the opportunity to create the ideal plan, and then submit week 1 assignments. Following week 1 you will receive a progress report allowing you to modify the assignments for week 2. The simulation will take between 6 and 8 simulated weeks to complete successfully. It should take you around an hour to experience, and complete the project.

Who is it for?

Students of Project Management who want to challenge and test themselves in the aspects of resource planning, and monitoring and control of a project. No prior knowledge of construction or engineering is required to complete the simulation.

Why Use it?

To test your planning skills, and to experience the 'thrills and spills' of a real project as you progress towards a conclusion.

What is included?

Unlimited attempts at the simulated project. Detailed feedback following completion of the simulation on your performance including learning points.
